ALGOSPHERE CAPITAL

Institutional Investor Overview

AI-Driven Quantitative Investment Platform

Confidential · For qualified allocator review · Research & transparency focused

1. Executive Summary

AlgoSphere is a **research-first, multi-strategy systematic platform** designed for institutional-style evaluation of diversified strategy books across liquid macro and index exposures. The stack emphasizes **risk-managed allocation**, transparent methodology, and **AI-assisted** research workflows — not retail speculation.

Scope: Multi-asset coverage including precious metals (e.g. XAU), FX, and major equity indices, supported by approximately **ten years** of daily historical data for research replay and portfolio construction discipline.

Posture: Risk-first design with diversification, drawdown awareness, and correlation controls in the research layer. The approach is **institutional** in tone: measured claims, explicit limitations, and separation of research artifacts from live execution policy.

Dimension	Summary
Research focus	Multi-family systematic strategies; data-driven scoring
Asset classes	XAU, FX, global indices (illustrative universe)
Data horizon	~10 years daily history (vendor-dependent)
Risk philosophy	Diversification, caps, drawdown discipline

2. Capital Structure

The following is an **illustrative** capital table for discussion purposes only. Actual commitments, terms, and closing documents govern any offering.

Investor	Commitment (USD)
Investor 1	50,000
Investor 2	50,000
Investor 3	100,000
Investor 4	100,000
Investor 5	250,000
Total	550,000

3. Profit Distribution Model

A simplified **50% / 50%** model is shown below: half of distributable profits allocated to the platform (AlgoSphere) and half to the investor pool. **Investor-side** amounts are allocated **by capital weight** unless otherwise specified in legal agreements.

Illustrative split

Recipient	Share of profits
AlgoSphere	50%

Investors (pool)	50%

Investor pool — weight by commitment

Commitment	Capital weight
$50,000	9.09%
$50,000	9.09%
$100,000	18.18%
$100,000	18.18%
$250,000	45.45%
Total	100.00%

4. Revenue Streams

1. Trading capital (shared): Economics may attach to pooled or segregated trading capital subject to fund documents; any split is contractual, not implied by software alone.

2. Subscription platform: SaaS-style access to dashboards and research views — typically **100% AlgoSphere** revenue line.

3. Licensing / technology: API, white-label, or deployment licenses — **100% AlgoSphere** unless a revenue-share is contractually agreed.

4. AI research platform (future): Institutional research tooling, allocator reporting, and workflow automation — potential incremental recurring revenue.

5. Risk Management

• **Multi-strategy diversification** across families to reduce single-factor dominance.
• **Risk-capped portfolios** and quota-style construction in research books.
• **Drawdown controls** embedded in evaluation metrics and screening.
• **AI-assisted risk allocation** as decision support — not autonomous capital deployment without governance.
• **No over-leverage** as a design principle; explicit leverage requires policy and documentation.

6. Technology Vision

AlgoSphere's roadmap centers on a disciplined **AI allocation engine**, **institutional-grade** reporting, a **multi-asset global** research footprint, and **scalable infrastructure** suitable for growing allocator interest — without compromising transparency or risk governance.

7. Investor Benefits

• **Passive exposure** (where structured via fund terms) to a systematic research process.
• **Transparent dashboard** and allocator-oriented materials for due diligence.
• **Performance tracking** framed as research replay and risk metrics — not marketing guarantees.
• **Institutional structure** alignment in documentation, governance, and professional presentation.

8. Legal & Risk Disclaimer

This document is **not an offer** to sell or a solicitation to buy any security or fund interest. Past performance and historical research replay **are not indicative of future results**. Markets involve substantial risk of loss. AlgoSphere materials are **research-based** and may rely on third-party data with known limitations. Prospective investors should consult legal, tax, and financial advisors. **No guarantee of returns** is made or implied.
